

Ranges

Mythallar: Spells of this range can effect any target the caster can both see and are within the area of effect of the same Mythallar he is in. If the caster of a spell with this range is also the creator of, or is the bonded agent of the creator of the Mythallar he is in, he is considered to have an Arcane Connection to every person, place or thing within the area of effect of the Mythallar. This effect does not apply to bonded agents if they are attempting to target the creator of the Mythallar. Note that is Range is only known to wizards properly trained in Netherese Magic Theory.

Personal: The effect of the spell is centered on the caster. The amount affected depends on the effect of the spell.

Touch: The caster or anything he touches, whether a person or thing.

Eye: The caster may target any person or creature that he has established eye contact with.

Reach: Anything the caster could touch (but is not necessarily touching) without moving substantially. Anything within roughly two paces.

Near: Anything within fifteen paces of the caster.

Far: Anything within a hundred paces of the caster.

Sight: Any thing that the caster can see. If the caster is standing on the highest point for miles, the range can be immense.

Arcane Connection: Anything the caster has an arcane connection to. Distance is immaterial unless the Storyguide chooses to impose some limit.

Symbol: This range allows the magus to cast a spell on any target for which he has a reasonable symbol. This symbol need not be an arcane connection to the target – the casters could draw a picture of the target, for example. The Storyguide must approve the choice of symbol.

A useful symbol must have a clear and unambiguous symbolic link to the target. A symbol being used in a spell forms a temporary arcane connection for the duration of the spell (or casting process). You can only make a symbol for a target you can identify in at least two independent ways. For example, “The King of England” and “Henry son of John”, or “The Mongol leader” and “The fat Mongol with bad breath and a gold ring”.

Durations

Mythallar: Spells of this duration last as long as it's effect, or the target of it's effect remain within the boundary of the Mythallar it was cast within. If the effect or target of the effect leaves the Mythallar, the spell ends immediately. The spell will also end if the caster, or creator of the Mythallar simply wishes it to. Note that is Duration is only known to wizards properly trained in Netherese Magic Theory.

Momentary: The spell lasts but a moment, and then dissipates. Any effect that it has remains, however. This is the normal duration for combat spells.

Concentration: The spell lasts as long as the caster concentrates.

Diameter: The spell lasts until the sun moves its diameter in the sky – almost exactly two minutes.

Sun: The spell lasts until the sun next rises or sets.

Ring: The spell lasts until the target of the spell moves outside the ring drawn at the time of casting, or until the ring is physically broken.

Moon: this spell lasts until both the full and new moon have been in the sky.

Fire: A spell of fire duration lasts until the original fire targeted is extinguished. While the duration probably will not last no longer than to the next sunrise or sunset, it is possible that the spell effect could persist indefinitely if the fire keeps going. It is thus rated as equivalent to Ring duration for the purposes of spell design.

Season: The spell lasts until the next solstice or equinox after its casting.

Year: The spell lasts until the fourth equinox or solstice after its casting.

"Year" +1: Includes "a year and a day", but others (such as 1001 days or 100 years and a day) also fall into this category. Note that is slightly longer than Year duration, and is measured from when the spell is cast, not by the turning of the seasons.

Permanent: The spell lasts forever, but remains forever magical. Thus it could be dispelled at some point in the future. This duration is only available for spells that have magical effects: natural effects are instant duration instead.

Instant: The spell effect persists forever as a mundane thing. It cannot be magically dispelled, although it can be destroyed by any method which would destroy the mundane thing it is. This duration is only available for spells with natural effects. Note also that this duration cannot be attained for magical creation or healing without the use of raw vis.

Until (Condition): The spell last until some condition is met. For example, such a spell might last until the name of God is invoked, until some item is touched with iron, or until a word in a list is said out of place (days of the week are spoken out of order, for example). Colors, words, or actions can also trigger the termination of the spell. Until (Condition) spells cannot usually be dispelled by formulaic magic if that is not part of the condition. Conditions must be specified when the spells that employ them are created. Alternately, they may be determined by the caster's sigil.

Bargain: A spell of Bargain duration can only be cast on someone who has just concluded a bargain or agreement with the magus. The magus' penetration total is doubled when checking whether the spell takes effect. If it does, nothing happens unless the target breaks the bargain. If he does, the spell takes effect without further resistance rolls. Bargain spells have a second duration which determines how long the spell lasts after it takes effect. To calculate the level of a Bargain spell, calculate the level of the spell that take effect when the bargain is broken and add three magnitudes.

Variable: A spell with a Variable duration lasts as long as the caster desires, up to its normal maximum duration. To calculate the level of a Variable spell, calculate the level of the spell using its maximum duration and add one magnitude.

Targets

Mythallar: Spells with this Target affect anything and everything, regardless of whether or not the caster can see or is aware of the targets, within the area of effect of a Mythallar, so long as they are cast within that same Mythallar. Note that is Target is only known to wizards properly trained in Netherese Magic Theory.

General Modifiers

Small: Affects a small item, something that a person of average strength could comfortably hold in both hands.

Individual: The spell can affect a single discreet thing, such as one person or one object. A huge boulder is a discreet object, a mountain is not (because it is joined to the ground).

Group: The spell can affect a small group of people or things. There should be no more than about a dozen things, and they must be an obvious group. Three grogs huddled together or a ring of standing stones are a group: six people out of a crowd are usually not.

Room: The spell affects a chamber and every one or thing in it. this room can be very large (the nave of a cathedral for instance, or a natural cave), but must be enclosed, and have definite boundaries. A courtyard would often count, a valley would not.

Circle: The spell affects everything within a ring drawn by the caster at the time of casting, and ends if the circle is broken, irrespective of the of the normal duration of the spell.

Structure: The spell affects a single structure and everything within it. The structure can range in size from a hut to a castle, but must be a single, linked edifice. As a rule of thumb, if it is all covered by one roof, it is one structure, but Storyguide discretion applies.

Boundary: The spell affects a well defined natural or man-made boundary. This could be the wall of a city, the edge of a village, the shores of a lake, the edge of a forest, or the base of a mountain. Since the ocean is not obviously bounded, it cannot be affected in this way. The caster must be able to see most of the bounded area unless the spell is being cast at Arcane Connection range.

Bloodline: A bloodline is all the people descended by blood from a given person (the immediate target). Only the immediate target need be within the spell's range, but all members of the bloodline are affected immediately. The spell applies to all members of the bloodline born during its duration, as well as those already living when it is cast.

Sight: The spell affects everything within the sight of the caster.

Variable: A spell with a Variable target allows the caster to affect as much of an area or as many targets as desired, up to the maximum allowed by it's normal target. To calculate the level of a Variable spell, calculate the level of the spell using its maximum target area and add one magnitude.

General Modifiers

- Fast Casting: 2nd Missile +1
- Fast Casting: Melee +2
- Fast Casting: 1st Missile +3
- Auto Targeting +1
- No Gestures +1
- No Voice +2
- Mythallar Bonded -1

No Gestures: By adding this modifier to a spell during its creation, the caster does not need to use any gestures during casting, nor does he acquire the penalties for not doing so. However, if the caster desires for what ever reason, he may use gestures, though Vigorous Gestures does not give the usual bonus to the casting total. This modifier may not be added to Ritual spells.

No Voice: Similar to No Gestures above, when this modifier is added to a spell's formula during creation, the caster does not need to use any level of Voice, nor does he receive the usual penalties for not doing so. He may use any level of Voice, if he desires, but Booming Voice does not add any bonus. This modifier may be combined with No Gestures, to create a subtle and silent spell, but bear in mind, doing so increases a spells level by 15. This modifier may not be added to ritual spells.

Auto Targeting: Adding this modifier to spells that would normally be Aimed, such as Incantation of Lightning, or Pillum of Fire, causes the spell to unerringly strike it's intended target, as long as the target is both within range of the spell and the caster can draw a direct line of sight to it. The down side to this modifier is that there is no chance of increased damage due to high targeting rolls.

Mythallar Bonded: Spells created with this modifier have their levels reduced by 1 magnitude for purposes of creation, learning and Vis cost, but such spells can **only** be cast within a Mythallar.

Fast Casting: This modifier allows spells to be cast in combat phases earlier than the standard Magic phase. Adding one magnitude allows the spell to be cast in the Second Missile phase, adding two magnitudes allows the spell to be cast in the Melee phase, adding three magnitudes allows the spell to be cast in the First Missile phase. The spells First Strike total is equal to the caster's Quickness + Finesse + a Stress Die, the virtue Fast Caster adds 3 to this total.

General: Superficially change a spell of less than the level of the Vim spell. This may not change the primary effect of the spell, or its power.

General: Significantly change a spell of less than the level of the Vim spell. This may not change the Arts of the target spell. A change in power of plus or minus one magnitude is a significant change, as is a change of target, if the target was possible for the original spell.

General: Totally change a spell of less than half the level of the Vim spell. This may change the Arts of the target spell, and needs no requisites for those Arts. The Vim spell affects the structure of the spell, not the things the spell targets. A change in power of up to two magnitudes is a total change. Any greater change requires either *Creo* or *Perdo* to create more magical power or destroy some.

General: Dispel effects of a specific type with a casting total less than the level of the Vim spell plus a quality die. A specific type could be Hermetic Terram magic, or Shamanic spirit control magic. A magus must have some

knowledge of a type of magic (although not necessarily ability to use it) to invent a spell to affect it.

General: Make something (including a magic item) seem non-magical to any Intellego spells of less than twice the level of the spell. The basic duration for this is sun.

General: Reduce a target's Might by one point for every point of the Vim spell plus a quality die that exceeds its might. Different spells are required for creatures tied to different Realms.

General: Dispel any magical effect with a casting total less than half the level of the vim spell plus a quality die.

General: Reduce the casting total for all magic cast by, in or on the target by half the level of the spell. Note that one spell will either reduce totals for magic cast by the target, in the target, or on the target, but not two or three of them. Which one is to be affected must be determined at the time the spell is invented. Basic duration for this is Sun. If two or more such spells affect one target, only the higher has any effect, they do not add.

General: Ward the target against creatures with Might less than the level of the spell plus a quality die. A creature warded against cannot directly affect the target physically or by magical means. A spell of this nature will only ward against creatures of one Realm. Note that wards against magical and faerie creatures can also be constructed using other forms, but those wards are more limited in effect.

General: Give the target magic resistance equal to the level of the spell. Two versions of this spell, or a version of this spell and *Parma Magica*, do not add their resistances. Only the higher resistance counts.

General: Sustain or suppress a spell you have cast whose level is less than the level of the Vim spell.

General: Create a conduit or container for spells with level less than the level of the Vim spell. A conduit puts you in mystic contact with the target (effective *Touch* range), while a container will hold a spell for a specific length of time before releasing it.

General: Sustain or suppress a spell cast by another with level less than half the level of the Vim spell.
